SUMMARY

BS Software Engineering graduate with a solid foundation in programming, data structures, and software development. Skilled in multiple languages and technologies including JavaScript, Java, C++, Python, and PHP, with hands-on experience in web and backend development. Experienced in building scalable applications, designing APIs, and working with databases such as MySQL and MongoDB. Passionate about problem-solving, clean code, and contributing to collaborative, agile teams.

WORK EXPERIENCE

Nobel Pakistan

Mern Stack Developer

Oct 2025 — Present

As a MERN Stack Developer at Nobel Pakistan, I designed and developed the Nobel Support – After Sales Management System, a platform built to manage complaints, stock movements, and automate workflows across service centers and warehouses.

Cyberappx Software House

Web Developer Intern

Sep 2024 — Jul 2025

Gained practical experience in software development by assisting in the design, development, and maintenance of applications. Collaborated with the team on debugging, testing, and performance optimization, while contributing to documentation and following best practices in the software development lifecycle.

EDUCATION

COMSATS University, Lahore, Pakistan - BS Software Engineering - (GPA: 3.17)

Sep 2021 — Jul 2025

Govt Islamia College Civil Lines, Lahore, Pakistan - Intermediate - (GPA: 80%)

Sep 2018 — Aug 2020

Lahore Model School, Lahore, Pakistan - Matriculation - (GPA: 82.18%)

Mar 2016 — Mar 2018

TECHNICAL SKILLS

Programming Languages : C, C++, Java, Python, Javascript, PHP

Backend Technologies : Node, Express, Laravel

Frontend Technologies : HTML, CSS, ReactJS

Database : MySQL, MongoDB, Firebase

Deployment : AWS EC2, Git, GitHub

Other Tools : Trello, Jira, Postman, Visio, Microsoft Project, Figma

PROJECTS

Nobel Support, Nobel Pakistan Private Ltd, [Link](#)

- Developed for Nobel Pakistan Private Ltd to manage and streamline after-sales operations.
- Handles complaint management for warranty and non-warranty products.
- Manages stock movements and tracks parts used in complaints.
- Improves efficiency, tracking, and customer satisfaction.

AI-Powered Snake Game, [Link](#)

- A classic Snake Game where the AI opponent adapts based on player's position, food, and obstacles.
- Applied data structures like linked lists to manage snake movement and collisions.
- Implemented custom pathfinding and avoidance logic to simulate intelligent opponent behavior.
- Built entirely in C++ using linked lists, custom algorithms, and standard I/O, without external libraries.

BuildSphere, [Link](#)

- A subscription-based platform for managing building operations (finance, HR, analytics, rentals, maintenance).
- With a resident application for unit bookings, memberships, and service requests.
- Integrated real-time alerts for rentals, subscriptions, and balance warnings.
- Improved operational efficiency and engagement through automation and smart tools and enabled streamlined communication between residents and management.

Astronaut Runner Game, [Link](#)

- Developed a 2D endless runner where a stationary astronaut avoids incoming obstacles.
- Included a Story Mode with themed levels and an Endless Mode with scaling difficulty.
- Integrated smooth jumping, obstacle spawning, and parallax background scrolling.
- Designed using Unity, with C# scripting, Animator Controller, Rigidbody2D, and BoxCollider2D.

Mood Cookbook, [Link](#)

- A web application that recommends recipes based on the user's mood for a personalized cooking experience.
- Implemented mood-based recipe generation with an AI-powered backend and dynamic filtering.
- Designed a responsive frontend with React and Tailwind CSS for seamless user experience.
- Deployed on AWS EC2 with GitHub Actions for automated CI/CD pipeline.
- Built with Node.js, Express, and React.

RentX, [Link](#)

- A backend system for landlords to list properties, track bookings, and manage rental payments.
- Integrated Stripe for secure transactions and auto-generated PDF contracts for tenants.
- Implemented tenant verification, rental history logs, and automated reminder notifications.
- Built using Node.js, Express.js and MySQL, with Sequelize ORM for structured and efficient database interaction.

Echo Desk

- A real-time chat platform using Node.js, WebSockets, MongoDB, and JWT for secure messaging.
- Enabled direct messaging, group chats, and private room access via unique join codes.
- Integrated role-based access and focused participation to enhance team collaboration.
- Implemented message persistence and typing indicators for improved user experience.

Taskify

- A task management web app with features like task deadlines, categories, and progress tracking.
- Includes user authentication, real-time task updates, and drag-and-drop task organization.
- Added priorities, daily email reminders, and a calendar-integrated task view.
- Designed a responsive UI with React and Tailwind CSS for cross-device usability.
